DATA SHEET

RIPPENSTRECKMETALL - Flat ribbed 8 mm

Description

Plaster support panel made of galvanised sheet steel. Tight meshes ensure better plaster anchorage. Very robust and resistant due to the 8 mm high ribs, but still easily deformable. Easily adaptable to all geometric shapes.

Application

Ribbed expanded metal is used to bridge joints and gaps between different building materials in plaster. For a crack-free surface, the plaster must be sufficiently elastic; hard and brittle plasters are not suitable. The usability of the product in the respective installation situation must be checked by the user!

Material

- Galvanised steel sheet
- Free from PVC, CFC and HFC
- Without substances of very high concern according to ECHA candidate list (REACH Regulation)

Packaging

- Free of halogen-containing compounds, azo dyes, flame retardants
