

HOHLWANDDÜBEL-PLUS "K" with adhesive plate**Description**

Hohlwanddübel-Plus for temporary fastening of props and corner brackets on double walls in the assembly state. The Hohlwanddübel-Plus is positioned on the formwork at the factory using hot-melt adhesive. Best possible hold due to roughened adhesive surface with Ø 50 mm. A small recess in the adhesive plate ensures minimum consumption of hot-melt adhesive.

Alternatively, the Hohlwanddübel-Plus can be attached to steel formwork tables with an adhesive pad (double-sided adhesive on carrier foil). Positive side effect: No more hot-melt adhesive runs into the screw guide!

Only the approved MULTI-MONTI®-plus SSK 16 x 130 mm concrete screw may be used for attaching the prop to the Hohlwanddübel-Plus. The adhesive plate can be easily removed through a predetermined breaking point. Supplied without screw.

Application

The Hohlwanddübel is attached to the formwork table with hot glue. The usability of the product in the respective installation situation must be checked by the user!

Material

- Polyoxymethylene (POM)
- Free from PVC, CFC and HFC
- Without substances of very high concern according to ECHA candidate list (REACH Regulation)

Packaging

- Free of halogen-containing compounds, azo dyes, flame retardants
